The Italian Universities Network for Development Cooperation (CUCS) has been founded in 2007 and nowadays includes 28 Italian Universities. The III CUCS Congress (CUCSTorino2013) was held in Turin on the 19th, 20th, and 21st of September, 2013. CUCSTorino2013 was co-organised by Politecnico di Torino and University of Turin in the frame of the growing partnership between these two Universities with other relevant development cooperation actors (the UN system, the Italian Ministry of Foreign Affairs, local authorities, foundations and NGOs and their respective partners in the so called “Global South”).

The Congress, titled “Imagining cultures of cooperation: universities networking to face the new development challenges”, focused on changes occurring at different levels on current development and cooperation trends (theories, policies, practices, and the definition of the Global Development Agenda post 2015), on the role of universities as development cooperation actors and their contribution in terms of research, education & training, solutions implementation in the field, technology transfer and co-creation.
Table of contents - Papers and posters

SESSION: OPENING REMARKS

iii Foreword
  Rectors: Gianmaria Ajani, Marco Gilli
iv Imagining cultures of cooperation: Universities networking to face the new development challenges
  Egidio Dansero, Francesca De Filippi, Emanuele Fantini, Irene Marocco
ix Italy and the post 2015 development agenda. The role of universities
  Caterina Bertolini
x University networks as actors of scientific and multidisciplinary partnerships: history and development
  of CUCS
  Emanuela Colombo
xii The development scenarios and university cooperation
  Gianni Vaggi
xvii Role and social responsibility of the university in promoting international cooperation for global health
  Edoardo Missoni

SESSION: EDUCATION, TRAINING AND HUMAN RESOURCES

Partnerships between academia and NGOs in technical studies in Italy

1 Partnerships between academia and NGOs in technical studies in Italy
  Guido Zolezzi, Angela Ortigara, Marco Bezzi, Emanuela Colombo, Lorenzo Mattarolo, Carlo Collivignarelli, Sabrina Sorlini, Mentore Vaccari, Francesco Vitali, Francesco Mongera, Italo Rizzi, Giovanni Armando, Giorgio Cancelliere, Fabio Fussi

Cooperation programs on education and teachers training: the role of university and effectiveness evaluation

8 Cooperation programs on education and teachers training: the role of university and effectiveness evaluation
  Cristina Coggi, Paola Ricchiardi
10 From a disciplinary approach to the culture of inclusion: the role of the Department of Education
  Studies of the University of Bologna in the project “Inclusive education for children with disabilities in Kosovo”
  Federica Zanetti
16 Implementing and evaluating teachers training and education interventions in the global south
  Cristina Coggi, Paola Ricchiardi
24 The project “Fenix” in TeofiloOtoni – Brazil – Minas Gerais. Training teachers on cognitive
  enhancement for children living in dilapidated containers
  Tiziana Bonasso
26 Cognitive enhancement for children in developing countries. A teacher training experience in a Kigali
  primary school.
  Roberto Trinchero

ICT and Capacity Building

33 ICT and Capacity Building: the contribution of interuniversity cooperation to the training of global and
  local entrepreneurship in cultural, economic and social sectors
  Angelo Inzoli
35 Possible areas and critical elements for building development cooperation initiatives in education and
  blended learning methodologies
  Geronamo Spreafico
40 The intercultural perspective of e-learning programs and the use of new technologies in Africa
  Angelo Inzoli, Lucie Zouya Mimbang
47 Participatory processes and tools for improving teachers professionalism: the IUS Case
  Piergiuseppe Ellerani, José Gil Mendoza Ma.
55 Alternative media strengthening and support mechanisms in African protracted crises and conflict-
  affected territories: can paradigm shifts assist and relief?
  Mohamed S.M. Yassin, Renato Sesana (Kizito)
HEI Cooperation for capacity building in biodiversity conservation, food security and sustainable development

62 HEI cooperation for capacity building in biodiversity conservation, food security and sustainable development
Cristina Giacoma

63 Cooperation experiences with HEIs in the Indian Ocean
Cristina Giacoma

67 Fostering “Little Green Guards” through a collaborative partnership to create an effective conservation education program for rural children in Guizhou, China
Chia L. Tan, Yeqin Yang, Kefeng Niu, Lei Shi, Weiyong Zhang, Isidoro Riondato, Cristina Giacoma, Emilio Balletto, Marco Gamba, John A. Phillips

73 A Program in higher education for food security and environmental sustainability
Carlo Semita, Elena Ferrero, Gabriella Trucchi, Angela Calvo

Posters

81 Teaching Italian and Arabic: an interchange between Italy and Libya
Barbara Airò, Silvio Beretta, Antonio M. Morone

82 «Insieme per Makamba»
Anaël Bianucci, Chiara Ghislieri

83 M.M.SC. Track In integrated environment and landscape design in the context of international cooperation. Field work internship as opportunity for engineering students to approach developing context

84 Prepare i bambini all’adozione internazionale. Ideazione di nuove prassi con gli operatori burkinabè
Maria Casonato, Paola Molina, Gisèle Thiombiano

85 Capacity building in ICT: the Experience of Maputo living lab’s Summer Schools
Aaron Ciaghi, Pietro Molini, Adolfo Villafiorita

86 1st level Master in “Oral Health in Disadvantaged Communities and Low Income Countries”
Giancarlo Vecchiati, Francesco Bassi, Patrizia Di Caccamo, Jennifer Atkinson, Luca Cavallo, Giulio Preti

87 Promuovere la salute orale in cooperazione internazionale: una sfida di salute globale nelle esperienze di progetti integrati in Libano e in Ethiopia
A. Rinaldi, P. Di Caccamo, G. Benedetti, B. Giordani, C. Resti

88 Establishing a new Master degree in sustainable crop protection in Egypt: a project funded by EU TEMPU/Programme
Paola Colla, Davide Spadaro, Maria Lodovica Gullino

89 Tutori di resilienza. Modello di formazione di insegnanti e social workers nell’ambito del programma MOSAIC del Ministero degli Affari Sociali Libanese con il supporto della cooperazione italiana
V. Hurtubia, F. Giordano, C. Castelli

90 University-NGOs partnership in formal education: the experience of CIVIC.A.S.
Francesco Mongera, Michela Bortoli, Guido Zolezzi, Marco Bezzi

91 A wood in the San Salvario neighborhood: A Photovoice project
Valentina Noya

92 Indo-Italian International School on "Use of e-infrastructures for advanced seismic hazard assessment in Indian Subcontinent"
Antonella Peresan, Giuliano F. Panza, Giampiero Viezzoli

93 L’osservazione: uno strumento di lavoro per gli educatori della prima infanzia.
Maria Nives Sala, Paola Molina

861 Master in Architecture for Health
Addendum
Francesca Giofrè, Giuseppe Primiceri, Ivana Miletic

SESSION: GLOBAL HEALTH

Training abroad for residents

94 Training abroad for residents
Luísa Mondo, Giuseppe Costa

Global Health Governance, healthy systems and development cooperation

97 Global Health Governance, healthy systems and development cooperation
Eduardo Missoni, Angelo Stefanini, Paola Brusa

100 The role of the university in the global health strategies of the Italian development cooperation
Angelo Stefanini, Eduardo Missoni
Global health education and the growing need for policy-making and management training of future health-relevant professionals  
Eduardo Missoni, Fabrizio Tediosi

107 The challenge of training health personnel in resource-limited settings  
F. Castelli, S. Caligaris, A. Matterelli, M. Bettinzoli, G. Sulis, V. Pietra

123 A.P.P.A.® PROJECT: an example of international health cooperation  
Francesca Baratta, Antonio Germano, Gaetano Di Lascio, Paola Brusa

130 GHC-TUSCANY: new partnerships for the global health  
Maria José Caldés, Nicole Mascia, Michele De Luca

Posters
135 ARACNE Tessere reti per il diritto alla salute dei migranti  
Comitato Collaborazione Medica

136 Promozione della salute in una società multietnica  
Iolanda Vigna, Christel Makoutsin, Mirela Rau, Bi Xu, Mariamel Gendi, Maria Cristina Odiard, Claudia Spezia, Maria Luisa Soranzo

137 Impact of pregnancy and labour complications on neonatal outcomes: a retrospective cohort study in a rural hospital of Ethiopia  
Elisa Bobba

138 Positive and negative effects of financial and non-financial incentive mechanisms for health workers in rural and remote areas of Ethiopia. Focus on Oromiya, Somali and Tigray regions  
Maria Alessandra Brocardo

139 Professionalization of future humanitarian health workers: an innovative hybrid training course for residents in anesthesia and critical care medicine in collaboration with an Italian NGO.  

140 Humanitarian Medec: an innovative training program for the professionalization of humanitarian health workers in anesthesia and critical care medicine during residency programs.  
P.L. Ingrassia, M. Foletti, L. Ragazzoni, A. Ripoll, F. Della Corte

141 Selezione e uso di idonei alimenti locali per la prevenzione della malnutrizione infantile  
Bruna Santini, Emanuela Nigro, Maria Luisa Soranzo

142 Bibliographic repository. Comitato di Collaborazione Medica (CCM)  

862 Addendum  
A.P.P.A.® Project: study of pediatric formulations for using in developing Countries  
Francesca Baratta, Francesca Tarditi, Paola Brusa

SESSION: SECURITY, RISKS, CONFLICTS AND VULNERABILITY

Geomatics for emergency management
143 Foreward to the oral session “Geomatics for emergency management”  
Piero Boccardo

146 Evaluation of TRMM Satellite data for mapping monthly precipitation in Pakistan by comparison with locally available data  
Muhammad Adnan Shahid, Piero Boccardo, Walther Câmara Garcia, Adriana Albanese, Elena Cristofori

155 Flood-risk mitigation in the Soliette River Basin: an international cooperation initiative (Haiti, Dominican Rep., Italy)  
A Domenegehtti, L. Brandimarte, M. Barbarella, A. Castellarin, L. Brandimarte, G. Di Baldassarre, A. Brath

164 Unmanned Aerial Systems for data acquisitions in disaster management applications  
Irene Aicardi, Filiberto Chiabrando, Andrea Lingua, Francesca Noardo, Marco Piras

Posters
172 Realisation of a Geomatics Laboratory for the Management of Hydrogeologic and Seismic Risks  
Giorgio Poretti, Chiara Calligaris, Michele Fermoetti

863 Addendum  
Solids waste management in armed conflicts and unstable conditions: a case study from the Gaza strip  
Marco Caniato, Mentore Veccari

SESSION: HUMAN SETTLEMENTS, TERRITORIES AND COMMUNITIES

Sustainability of appropriate environmental technologies in developing countries
173 Sustainability of appropriate environmental technologies in developing countries  
CeTAm
Imagining cultures of cooperation: Universities networking to face the new development challenges
Proceedings of the III CUCS Congress

175 Sustainability of appropriate environmental technologies in developing countries: general framework
Carlo Collivignarelli, Sabrina Sorlini, Francesco Vitali

179 Sustainability of water supply projects: considerations from two case studies
Sabrina Sorlini, Luca Rondi

188 Healthcare sustainable design in the global south. A tale of two stories.
Marco Morandotti, Daniela Besana

196 International university cooperation for valorizing crude earth as building material in Chad and Cameroon
Jean Pierre Temga, Angelo Mazzi, Jean Pierre Nguetnkam, Daniela Palazzini, Robert Ndjouenkeu, Francesco Vitali

204 Enhancing energy access for the poor: the role of appropriate technologies in the use of traditional solid fuels
Francesco Vitali, Mentore Vaccari

210 Study of design of a low environment and social impact landfilling in Togo, Assahoun Village
Alessandra Bonoli, Sara Bellavita

Emergency vs Development. The architectural project within development cooperation

216 Emergency vs Development. The architectural project within development cooperation
Francesca De Filippi, Alessio Battistella

218 Architecture quality of cooperation projects
Camillo Magni

220 A methodological proposal for the assessment of the sustainability of post-disaster reconstruction processes
Elisa Salvaneschi, Marco Morandotti

228 Developing emergency
Riccardo Vannucci

237 Vernacular approach to architectural design in a development cooperation experience with Mexican indigenous communities
Roberto Pennacchio, Roberta Nicchia, Alessandra Basile, Andrea Tulisi.

Community development and psycho-social intervention

245 Community development and psycho-social intervention
Alfredo Mela, Norma De Piccoli

246 International cooperation in the field of higher education: the TEMPUS Programme
Norma De Piccoli, Silvia Gattino, Cristina Mosso

249 African cinema as instrument and opportunity in inter-academic cooperation: a project in Ngozi (Burundi)
Emanuela Gamberoni

254 Appreciative inquiry in Saint Martin: exploring the potential for change
Manuel Marrese

261 Identidad, memoria y desarrollo de comunidad
Anna Maria Bastianini, Ester Chicco, Alfredo Mela

864 Cooperation, discours, changement: bias dans le discours académique sur le conflit
Davide Ziveri, Angela Fedi

Plans and projects “beyond the boundaries”: subjects, knowledge and tools

267 Plans and projects “beyond the boundaries”: subjects, knowledge and tools
Daniela De Leo

270 Una exploración de los currículos de las escuelas europeas de planeamiento en el ámbito de la planificación descentralizada
Valentina Alberti, Sara Bindo, Enrica Gialanella

276 Spatial planning in predominantly vernacular settlements. The case of African rural towns.
Roberta Nicchia

284 Developing the new strategic Masterplan for Herat (Afghanistan)
Mirella Loda, Mario Tartaglia

293 Knowledge and processes of sustainable development for the South-East Europe
Chiara Camaitoni, Ilenia Pierantoni, Massimo Sargolini

301 Beyond tourism: discovery of the historical and artistic heritage of Havana
Micaela Scacchi

309 Sapienza Millennium. Projects and thoughts. University of Rome Sapienza and the international cooperation
Maria Grazia Montella
Imagining cultures of cooperation: Universities networking to face the new development challenges
Proceedings of the III CUCS Congress

Posters

315 Participatory design and building with international students and indigenous communities of Mexico
Alessandra Basile, Roberta Nicchia, Roberto Pennacchio, Andrea Tulisi

316 Haiti | 1 | Foyer d’accueill aux enfants démunis d’Haiti
Architettura Senza Frontiere PiemonteONLUS

317 Argentina: Cooperation between Fossano and Rafaela
Architettura Senza Frontiere PiemonteONLUS

318 Haiti | 2 | Re-start from straw
Architettura Senza Frontiere PiemonteONLUS

319 Multiple voices design for the south of Quito: cooperation between universities and municipalities
Roberta Bianchi, Luca Brivio, Maurizio Chemini, Alberto Merigo

320 Elimu na Malezi: psychosocial adjustment assessment in Tanzanian primary school children
Massimo Cotichella, Emanuela Rabaglietti, Beatrice Sacconi, Samwel Kilimuhana, Vivian Nankuru

321 Float-ram: a new human powered press for earth blocks
Carlo Ferraresi, Walter Franco, Giuseppe Quaglia

322 Design for emergency: training and educational practices
Alberto Giacardi, Irene Caltabiano

323 Evaluation of the horizontal flow planted filters end anaerobic filter for the treatment of greywater in Venezuela
F.H. Gomez, S. Sorlini, F. Vitali, M.C. Collivignarelli

324 Costruire con la comunità
Veronica Brugaletta, Giorgio Ceste, Marco Ciavaglia, Natalia Da Silveira Arruda, Selene Guelfi, Janet Hetman, Giacomo Lanino, Carlo Mossetti, Simone Peditto, Valentina Sismondo, CRD-PVS Politecnico di Torino

325 Hervé Brugoux. Architetture in Madagascar
Laura Marino

326 Team C.A.S.A.
Mezzosangue lab, AK0

SESSION: ECONOMIC DEVELOPMENT: ACTORS, NETWORKS AND PROCESSES

Immigrant entrepreneurship

327 Immigrant entrepreneurship
Alessandro Arrighetti, Andrea Lasagni

328 Percorsi evolutivi e varietà delle imprese etniche in Italia
Alessandro Arrighetti, Daniela Bolzani, Andrea Lasagni

336 Immigrant women and entrepreneurship: strategies of development and forms of transnationalism
Deborah De Luca

Local development in international cooperation

345 Local development in international cooperation: issues, approaches and perspectives for a territorialisation of development policies
Egidio Dansero, Cristina Scarpocchi

349 Local development: some personal reflections
Massimo Pallottino

350 Territory and local development in the Italy-CILSS Fund
Egidio Dansero, Agnese Migliardi

356 Producers’ cooperatives brokers or mirrors of social structure: a case study from Northeast of Brazil
Carla Ing uaggiato

365 RENEP – Renewable energy for Palestine
Giulio Mondini, Sergio Olivero, Paolo Lazzeroni, Federico Stirano, Vito Antonio Ricci, Piercarlo Montaldo, Eliana Perucca, Carlo Micono, Guido Zanzottera

370 The contribution of local taxation to the sustainability of the Millennium Development Goal 7C in the regions of Louga (Senegal) and Niamey (Niger)
Maurizio Tiepolo, Sarah Braccio, Mario Artuso

378 Development cooperation and sustainable tourism in Mozambique: territorial systems and cultural heritage in the Zinave National Park
Sara Belotti

386 The ILO’s approach to local development
Roberto Di Meglio

390 The territorial approach to local development and local governance: the UNDP ARTinitiative
Francesco Bicciato
Imagining cultures of cooperation: Universities networking to face the new development challenges
Proceedings of the III CUCS Congress

Microfinance: from theory to practice
393 Microfinance: from theory to practice
   Pierluigi Conzo
394 Social inclusion through microfinance: an analysis of current approaches and new follow-up procedures
   Andrea Bigio
402 The willingness-to-pay for insurance: evidence from Southern Ethiopia
   Davide Castellani, Belaynesh Tamire, Laura Viganò
412 Microfinance in a post-disaster context: The case of the 2004 tsunami in Sri Lanka
   Pierluigi Conzo, Leonardo Becchetti, Stefano Castriota, Davide Libralesso, Ilaria Urbinati

The Global economy and international development cooperation in emerging countries and new markets
419 The global economy and international development cooperation in emerging countries and new markets
   Emanuele Fantini
420 The impact of emerging countries on Sub-Saharan African economies: factors of long-term growth?
   Alice Nicole Sindzingre
429 Generalized tariff preferences for development and emerging countries: assessment and perspectives
   Lorenzo Mola
438 Crowding in the private sector under a developmental state: which role for international cooperation in Ethiopia?
   Michele Boario, Emanuele Fantini

Posters
446 Processo di pianificazione delle catene alimentari per la creazione di sistemi alimentari in un’ottica di sviluppo locale
   Andrea Calori, Andrea Magarini
447 Best practices in micro-finance: evidences from the International Award
   Maria Cristina Negro, Dario Peirone
448 Community managed micro-finance experiences in Europe: the self-funded communities
   Patricia Rodriguez Pulido, Francesca Lulli, Abdoulaye Fall
449 Economic growth, inequality and new measures of well being. Preliminary issues and fieldwork.
   Andrea Salustri

SESSION: DEVELOPMENT COOPERATION METHODS AND APPROACHES

Open Data and Open Access: which knowledge sharing for development cooperation?
450 Open Data and Open Access: which knowledge sharing for development cooperation? Data and information organization for development cooperation and knowledge sharing
   Susanna Sancassani

Beyond GDP: definition and making of new welfare indicators
454 Beyond GDP: definition and making of new welfare indicators, reflecting on conceptual and methodological issues
   Elena Camino
456 From enforcement to dialogue. Listening to the voices of stakeholders: a challenge for university
   Paola Bianca Camisani, Elena Camino
465 Sustainability: from the imaginaries to the indicators… and back? The case of India
   Simone Contu, Elena Camino
474 Cultures of cooperation: strengthening the network with Gandhianeconomists
   Nanni Salto

STRATEGIES OF LAND EXPLOITATION AND MANAGEMENT IN THE AREA OF AKSUM (NORTHERN ETHIOPIA) BETWEEN THE 1ST MILLENNIUM BC AND THE 1ST MILLENNIUM AD

Luisa Sernicola

University of Naples “L'Orientale”, luisasernicola@gmail.com

ABSTRACT

Northern Ethiopian highlands, as well as most of the country and the whole Horn of Africa, have always been perceived as low-productivity regions with very fragile ecosystems, where local communities, often relying on a traditional ox-plough agriculture, are continuously exposed to the threat of drought, famine and starvation because of environmental and social factors.

This paper intends to contribute to the reconstruction of the long-term dynamics of human-environmental interactions in these regions by analyzing how agricultural land was managed, exploited and manipulated and how ancient farming communities faced environmental degradation phenomena like soil impoverishment and erosion.

The study will focus on the area of Aksum, an important historical centre located in the region of Tigray, northern Ethiopia, which emerged between the 1st millennium BC and the 1st millennium AD as the capital city of a vast kingdom. Agriculture in Aksumite history is commonly regarded as a system in which problems of soil-exhaustion are linked to land clearance and population increase, and the intensification of agricultural resources’ exploitation has long been considered the trigger for both Aksum’s rise and decline. Nevertheless, archaeological and paleoagricultural investigations recently conducted in the area significantly clash with this model, suggesting that even during the periods of greatest extent of Aksumite kingdom the erosion rate was relatively low, proving the effectiveness of Aksumite farmers strategies in managing and maintaining soil. The debate, far to be resolved, represents an useful spur to the course of research as understanding ancient farming systems may facilitate the design of future strategies for sustainable land-use.

INTRODUCTION

The northern regions of Ethiopian highlands have, for many years, been perceived as low-productivity areas characterised by extremely fragile ecosystems where climatic fluctuations and/or conflicts among ethnic groups or polities periodically result in severe phenomena of environmental, social, and economic deterioration. Episodic events or long-enduring processes continuously act at local and regional scales, threatening local communities with chronic drought, famine, and starvation. Land-use and land-management strategies, and their environmental, economical and social bearings, are therefore issues of great significance for present Ethiopia as 85% of the country’s economy is based on agriculture practiced with traditional techniques and equipment. In particular, soil erosion processes are considered a major factor heavily affecting rural ecosystems.

This paper will describe the results of over ten years of combined archaeological and paleoenvironmental studies
conducted in the area of Aksum (Tigray, northern Ethiopia) by the University of Naples “L’Orientale”\(^1\) in collaboration with geologists, geoarchaeologists and soil scientists from Boston University (USA), University of Cambridge (UK), University of Florence and University of Ferrara (Italy), and aimed at investigating ancient strategies of manipulation and exploitation of the territory and at reconstructing long-term dynamics of human-environment interaction in this area, also in the light of present phenomena of environmental degradation and soil erosion processes.

The basic theoretical assumption is that archaeology can give a significant contribution to larger debates on present environmental degradation and on the role played by human communities in ecological dynamics providing evidence about long-term ecological processes and on their temporal nature. Archaeology, actually, has progressively developed very sophisticated procedures to recover, analyse and explain, by means of cultural materials, the traces left by human actions on a specific territory and to organize such evidence in spatial-temporal sequences with century scale resolution for the Late Holocene.

The research adopted a multidisciplinary approach that integrated innovative methodologies with well established procedures. Archaeological, geoarchaeological, geological and ethno-historical investigations generated site-specific datasets necessary to model the ancient landscape of the area, and provided new perspectives for analyzing the causes and rates of ancient erosion dynamics, and the evaluation of the relevance and effectiveness of ancient strategies adopted by rural communities to face this problem. Archaeological investigations included the systematic, complete-coverage survey of the area of Aksum [1] in order to document the distribution of archaeological evidence within the region and to reconstruct the ancient settlement pattern. Geoarchaeological, geological and pedological investigations represented a basic component of the project as they provided paleoenvironmental evidence for a more detailed correlation between natural and cultural phenomena. Archaeological, geological, and geoarchaeological evidence were spatially positioned using GPS and related information have been uploaded, through geo-referencing, in a Geographical Information System and analysed through the implementation of thematic maps, statistical and spatial analysis, Remote Sensing and 3D modelling. Ethno-historical researches and enquiries were conducted to get information from written historical sources and local oral traditions about local and regional environmental changes, land-use and land-management strategies, and demographic pressure. In particular, ancient Ethiopian texts, reports by European travellers who visited the country since the 15th century and recent data published by International Agencies were scrutinised. Finally, information about modern infrastructures have been recorded as a first step towards possible future strategies of protection and promotion of traditional knowledge as an important aspect of the cultural heritage.

SOIL EROSION AND ANCIENT HUMAN COMMUNITIES: NEW EVIDENCE FROM ARCHAEOLOGICAL AND PALEOENVIRONMENTAL STUDIES

The city of Aksum is located in Tigray, the northernmost region of Ethiopian highlands (Fig. 1), at an average altitude of about 2,200 m asl, in an alluvial plain situated at the hub of a radiating network of river valleys linking the area with the surrounding regions. The plain is dominated in the centre by two prominent hills, Bieta Giday and May Qoho while a ring of surrounding hills forms the natural boundary of the territory (Fig. 2). The geological and lithological variety of the area results in a mosaic of soils with a different degree of productivity [2].

The area is characterized by a tropical climate with an average annual temperature between 15° C and 20° C, and by highly seasonal rainfall, mainly concentrated between June and September. In moist periods, a second rainfall may

1 The Italian Archaeological Expedition at Aksum of the University of Naples “L’Orientale” conducts archaeological researches in the area of Aksum since the early nineteen-nineties. From 1993 to 2003 has conducted archaeological investigations on the hilltop and northern slopes of Bieta Giday hill in collaboration with the Boston University (co-directors Rodolfo Fattovich and Kathryn A. Bard). Between 2004 and 2009 has investigated the plain to the north of Aksum and the eastern, western and southern slopes of Bieta Giday (director Rodolfo Fattovich). Since 2010 conducts researches at the pre-Aksumite site of Segelamen, ca. 12 km to the SW of Aksum (director Rodolfo Fattovich).
occur between March and May. Paleoenvironmental studies suggest that, during the Holocene, this region experienced an alternation of wet and dry periods with an evolution towards more arid climatic conditions from 1000 AD [3, 4, 5, 6, 7].

The vegetation pattern is characterized by perennial herbaceous plants, thickets of bushes and scattered, medium-height trees, including acacia and African olive. Eucalyptus have been planted since the beginning of the 20th century. The domestic fauna includes dromedaries, asses, cattle, sheep, goats and poultry, while wild species are mainly represented by hyenas, baboons and a wide variety of endemic and other birds.

From about the 1st century BC, the area of Aksum progressively emerged as the capital city of a powerful and vast kingdom (the so-called “Kingdom of Aksum”) directly involved in a long-distance exchange circuit which included the northern Horn of Africa, the Nile Valley, the Mediterranean, Southern Arabia, and the western coastal regions of India [8, 9]. Nowadays, Aksum is one of the most important religious centre of the Ethiopian Orthodox Church, and a very important symbol of Ethiopian cultural identity. Moreover, it is presently one of the major archaeological areas in the country, and is included in the UNESCO World Heritage Sites List.

Due to its geographical position, the area of Aksum is exposed to severe phenomena of environmental degradation, the whole ecosystem being extremely sensitive to climatic changes. One of the most common forms of landscape degradation occurred in this region is soil erosion. The current model for ecological history of the area of Aksum, and of the whole Tigrean plateau, argues for a progressive increase in land clearance and human impact on the natural environment due to the intensification of agriculture since the 3rd-2nd millennia BC, which ultimately resulted in severe soil impoverishment and erosion processes [3, 4, 10, 7].

On the contrary, recent archaeological, pedological, geomorphological, and paleoagricultural investigations in the area highlighted new and encouraging results concerning the effectiveness of ancient terracing systems and land-management for the conservation/exploitation of the hill slopes and provided significant information on the possible causes of soil depletion and erosion [11, 12, 13].

Research, carried out at a local scale, involved the northern slopes of Bieta Gyorgis hill, an area largely devoted to farm-lands where the present landscape is characterized by scattered isolated rural dwellings or hamlets alternated with cultivated fields. A smaller portion of the total area is given over to grazing while most of the up-slopes is characterised by forests of eucalyptus planted to minimize soil erosion.

Here, as in many other parts of the Tigrean plateau, farming has been practiced along the slopes of the hills since at
least since the mid-1st millennium BC, by means of a terracing technique which helps to reduce the gradient and improve the drainage of the soil [14, 7]. The traditional plough still used in the region is the maresha, an “ard plough” drawn by a pair of oxen that seems to have been introduced in Ethiopia since at least the 1st millennium BC [15]. The impact of the plough against the stones is frequent, and the stones are consequently scratched (Fig. 3): 1) on the top if rocks are at a lower depth than the tilling depth (8-16 cm), or 2) on the sides if rocks are protruding [11, 12]. The occurrence of plough-marks, thus, is a safe evidence for past cultivation on lands presently cultivated or abandoned.

In the case of Aksum, the finding of large outcropping rocks with ancient plough-marks in the now abandoned area between Enda Giyorgis and Ma Qono, on the northeastern slopes of Bieta Giyorgis hill, allowed to reconstruct ancient cultivation procedures and agricultural terracing systems. The systematic mapping and study of the diverse thickness and orientation of the marks suggest that ancient ploughing procedure was, similarly to present, characterised by concentric movements of the plough along the perimeter of the terraces, from the outer edge towards the centre [11, 12]. Moreover, as the plough-marks may be found at different levels on the outcropping rocks, these provide a reliable indication of the soil erosion rate during the various chronological phases. The chromatic differences in the superficial alterations of the rock (becoming progressively darker as exposure to external pressure and atmospheric agents increases) show that the highest marks are the most ancient while those found lower down are progressively more recent (Fig. 4). The correlation between different levels of alteration recorded on the rocks and the phases of utilization of the terraces testified by the associated archaeological material, allowed to estimate the rate of soil erosion occurred in the area from the Aksumite period up to the present. The study suggests that the level of erosion occurred in the area during the 1st half of the 1st millennium BC (which is a period of increasing demographic pressure in the area [16, 17, 18]) is between 1.9 and 4.8 t ha-1 y-1^2 [11, 12].

This value, which is much lower than the threshold erosion rate commonly accepted by international soil conservation agencies, shows that ancient strategies of land management and exploitation were effective and that the whole ecosystem was extremely stable. On the contrary, the land reform started up in the early nineteen-seventies during the socialist regime of Menghistu Haile Maryam, which led to the abandonment of the area under examination, caused a significant increase in the rate of soil erosion which sharply accelerated environmental degradation processes. Thus, at least in this area, high demographic pressure and soil exploitation should not be considered the principal cause of soil depletion and erosion. On the contrary, anthropic presence and land-exploitation appears to play a crucial role as

agricultural infrastructures contributes to preserve the landscape and to maintain an environmental stability. Rather, soil erosion and impoverishment seem to be the result of a progressive lack of maintenance of the infrastructures connected with the abandonment of the area. The relationship between soil erosion and human activity in the Aksum area should therefore be considered in a new perspective, probably nearer to the paradigm “More people less erosion” introduced by Tiffen at the end of the last century [19]. This interpretation seems to be confirmed by modern data according to which the areas worst hit by soil erosion in the Ethiopian highlands are those which are not currently exploited (3.8% of the total) with an erosive intensity of 70 t ha⁻¹ y⁻¹ [20]. Geoarchaeological analysis conducted on exposed paleosols in the same area confirm that between the 1st millennium BC and the 1st millennium AD the territory was characterised by stable environmental conditions with localised, low-energy erosional episodes [13, 18].

The hypothesis emerged by paleoenvironmental data and ancient plough-marks is supported by archaeological evidence as suggested by the reconstruction and analysis of the ancient settlement pattern of the study-area, and, in particular, of the diachronic changes occurred in the spatial correlation among ancient rural settlements; a method commonly used for measuring anthropic reaction to environmental changes [21]. If, as is commonly claimed, excessive anthropic pressure degraded the local environment by accelerating soil erosion processes, the people who occupied and exploited the northern slopes of Bieta Giyorgis hill would eventually be compelled to abandon this portion of the territory and to relocate their activities to more productive areas. This process of periodic relocation should be detectable in the archaeological record in the form of spatial segregation among sites from adjacent chronological periods and by the reduction in the number of settlements in the area under examination in favour of an increase of the latter in other parts of the territory. On the contrary, in the absence of erosion or environmental degradation phenomena, an economically productive area will be exploited constantly over time and the distribution of the settlements will show a high degree of spatial aggregation. Quantitative analysis and statistical measures of spatial correlation have been employed on sites from adjacent temporal periods to evaluate the degree to which settlements were relocated from one period to the next; nearest-neighbour (NN) analysis is the one presented here. The NN coefficient is a tool frequently used in the sphere of archaeology and human geography consisting of a ratio of the actual average distance between the nearest neighbours among a set of points, and the expected average distance if the same number of points were randomly distributed within the same area [22]. Values around 1.0 indicate a random distribution while values greater than 1.0 are indicative of spatial segregation; values smaller than 1.0 indicate a concentrated distribution of points with a high rate of spatial aggregation. In this case, the coefficient of spatial correlation was also combined with the diachronic changes in the number of settlements recorded in the area under examination and in the whole Aksum territory.

Diagram 1 clearly shows how, during the whole Aksumite period (ca. 50 BC-AD 700), the area under examination was generally characterized by a spatially aggregated distribution of the settlements with a NN coefficient reaching its lowest value (and thus the pick of spatial aggregation) during the Middle Aksumite period (ca. 350-550 AD, “Aksumita Medio” in the diagram). Thence, the settlement pattern of the area seems to confirm the hypothesis obtained from geoarchaeological analyses and from the erosion model elaborated on the basis of paleoagricultural evidence, according to which, during the Aksumite period, characterized by intense demographic pressure and by constant agricultural exploitation of the north-eastern slopes of the Bieta Giyorgis hill, the traditional management system of the territory proved to be sufficient to minimise the rate of soil erosion along the slopes, allowing a constant exploitation of the study-area.

A slight decrease in settlements’ spatial aggregation occurred between the end of the Middle Aksumite period and the Post-Aksumite period (ca. 550-1100 AD, “Post-Aksumita” in the diagram). This phenomenon should be most likely related to the general demographic decrease which affected the area of Aksum during this period [17, 18, 23] and resulted in the progressive decline of Aksum’s political and economic importance. Whatever the cause of this demographic decline was, the progressive abandonment of the area might have accelerated soil erosion phenomena due to both environmental factors and the lack of MAINTENANCE of infrastructures as geoarchaeological evidence
suggests that, between the 7th and 8th century AD, the whole Aksum territory was subjected to severe environmental degradation [3] and that, towards the end of the 1st millennium AD, the whole Tigrean plateau was affected by a period of environmental instability probably due to a phase of greater aridity [6]. The abandonment of an area may be the result of the interaction of various factors of ecological, economic and/or social nature.

Although military actions today strongly contribute to accelerate environmental degradation processes of the region by forcing communities to abandon the areas they live in and to find different strategies for exploiting the environment, famines caused by drought, invasions of locusts or epidemics, are to be considered as well. Different types of sources show that these problems are not limited to the recent history of the region. Archaeological evidence suggests that eastern Africa appears to having been affected by plague at least since the 6th century AD [17, 23], when, according to Procopius, the so-called “Justinian Plague” spread from northeastern Africa to the whole of the Mediterranean [24]. Historical sources highlight that the history of famine on the Tigrean plateau, recorded in literature and in the local and foreign chronicles, goes back at least to the 8th-9th century AD, and that the phenomenon has periodically recurred ever since then [25]. The consequences that periods of epidemics and famine have on farming and on the organisation of the rural communities are well-known today from ethnographical observations. As well as the loss of human lives and livestock, famine and epidemics reduce the energy of the farming communities and leads to the destruction of natural resources through a system of progressive actions and reactions which culminate in the weakening of the social structures and the abandonment of the populated area. This process, which has been extensively studied by anthropologists and historians, is characterized by four sequential phases consisting of: a) reduction of consumption; b) temporary migration, generally limited to the head of the family; c) divestment of the environment and the available resources; and d) migration of the entire household [26]. In the most severe cases, the central government uses the mass relocation of entire communities from the areas strongly affected by the disease to less densely populated regions as a long-term solution to the problem of soil depletion and food starvation.

To conclude, the case-study here presented demonstrates that combining archaeological evidence, environmental and historical data, and ethnographical observation allows to provide a long-term reconstruction of human-environmental interplay, to identify ancient strategies of land exploitation and to investigate how ancient communities faced environmental degradation through time. This might be extremely useful to define the trajectories through which present situation emerged from the past, to increase our knowledge on the possible causes of environmental problems still affecting human communities and, perhaps, to contribute to the design of future strategies for sustainable land-use especially in those areas, like the northern Ethiopian highlands, where many activities of daily life are still practiced by using traditional knowledge and equipment.
